

FormsPro has many different features to fit your business needs. Helping to foster efficiency, these are some of the most popular features to help transform your forms to work better for your business.

Conditional Logic:

Provide the ability to show additional fields in FormsPro based on the answer to another input on a form. Conditions also can drive emails and reports, workflow processes and data integrations.

Connected Data/ Data Maps:

Process of connecting a data field from one source to a data field in another source. Pre-populate forms for more efficient completion of service.

Calculated Fields:

Used to calculate numeric entries on a form. Automatically calculate chosen fields for easy viewing on reports.

Dynamic Tables:

A table that a user can add rows to as they enter information on a form. Create a table as large as the job requires allowing the user to add rows and create multiple inputs.

Repeatable Groups:

A "container" on a form that you can drag and drop inputs into to create a group of information that repeats on the app. Systematically add pre-defined fields to a form.

Data Sets:

Data sets are data from applications or queries that are pulled onto a form, and can be filtered to specific data related to previous entries, such as the user or a work order number.

Reusable Sections:

Use sections to speed up the form building process by adding a group of pre-set fields onto multiple forms.

Site to Site Deployment:

Use Form Deployment to deploy/transfer your forms, and all associated components, from site to site. Easily test forms in a test environment and quickly deploy updates as needed.

Media Fields:

Upload photos, video, or audio. Store media on an Azure file storage site for immediate access to digital assets upon submission.

Signature Capture:

Customers can sign immediately after work is completed for proof of service and payment, or send a text or email notice to a customer that a signature is needed when they're not on site.

Reports

Designer and email capabilities. Send an easy-to-read report with all necessary information once a form is completed. Unique forms can be created for customers and internal users.

Logos

Put logos on forms to take control and make them your own with customizable branding.
